4.4 Fund Investment Strategy and Operation Analysis in the Reporting Period

The first quarter of 2025 saw divergence in performances of the capital market. In the first two month, DeepSeek's break drove a structural rally in the TMT sector, and eventually became quite crowded, which peaked at nearly 50% of total market turnover. March witnessed surge of Non-ferrous Metals as supply-constrained pricing dynamics materialized. By the end of March, U.S. tariff further boosted the domestic demand-sensitive assets due to the investors' hedging sentiment.

Looking forward, the market is positioned for a breakthrough transformation and structural reshaping. The first key driver lies in policy synergy, where coordinated monetary policies, including benchmark interest rate reductions and adjustments to existing mortgage rates, effectively reduced the interest rates, while other fiscal stimulus are expected for furtherance of the aforesaid, forming a potent policy combination. Secondly, the material improvement of the supply-demand landscape is expected to be an important supporting factor. Following years of excess capacity challenges, multiple sectors have proactively responded to price pressure through capital expenditure controls and operational rate adjustments. With soft and gradual demand recovery in 2025, these sectors after appropriate adjustment hopefully will lead the realization of rebalance of supply and demand, laying foundation for the overall performance of the market. The synergy of these two variables may serve as the key drivers to overturn the stalemate in the market.

HSBC Jintrust Large Cap Fund focuses on analyzing the distinct competitive advantages of large cap equities. The Fund Manager will allocate to large cap blue-chip stocks with sustained and steady growth of profitability, low valuation, and leading the respective sectors selected after analysis of the preliminary stock selections in terms of their value and growth in consideration of their positions in the sectors. Given the positioning of the Fund, we concentrate on opportunities within the blue-chip universe. For 2025, we remain our preference on the large-cap blue-chip stocks, where many quality candidate companies' valuation is at recorded low level, in particular: 1) we will allocate to cyclical sectors encountering structural demand recovery in the economy of this year, with supply-side constraints that may amplify rebound in pricing power and earnings. 2) sectors with comparably low economic correlation or growth segments driven by their inherent industrial cycles, primarily concentrated in certain consumer segments and high-end manufacturing niches.
