

HSBC Collective Investment Trust

HSBC Post Retirement Multi-Asset Fund

Monthly report 31 May 2025 | Share class AMFIXA-HKD

Fund center

Risk Disclosure

- The Fund invests in a diversified portfolio of fixed income securities and equity securities, money market and cash instruments and offers distribution classes which aim to deliver regular and predictable payouts (which may be paid out of capital) to address income needs in retirement.
- Fixed payout classes pay out a pre-determined annualized fixed percentage of their net asset value (NAV) or adjusted NAV at a pre-determined frequency. The pre-determined annualized fixed percentage does not reflect either the actual or expected income or performance of the Fund. Consequently, fixed payout classes are expected to payout capital gains and/or of capital and may do so over a prolonged or indefinite period. Paying-out of capital represents a withdrawal of investor's initial investment and may result in an immediate reduction of the NAV per unit and a substantial erosion of an investor's initial investment over the long term. Over the very long term an investor's initial investment may be nearly or even completely exhausted. A positive payout does not imply a positive return.
- The Fund may invest in other collective investment schemes, and need to bear the underlying funds' fees and expenses on top of the Fund's own fees and expenses.
- The Fund may invest in financial derivative instruments for investment purpose which may lead to higher volatility and high risk of capital loss.
- The Fund's investments may involve substantial credit, credit rating, currency, investment, volatility, liquidity, interest rate, valuation, general equity market, general debt securities, emerging markets, mainland China market, non-investment grade and unrated debt securities, sovereign debt, asset allocation strategy, tax, political, small/mid-capitalization companies related risks and risks of investing in other collective investment schemes adopting liquid alternative strategies. Investors may suffer substantial loss of their investments in the Fund.
- Investors should not invest solely based on factsheet and should read the offering documents for further fund details including risk factors.

Investment objective

The Sub-Fund aims to provide long term total return through an active asset allocation in a diversified portfolio of fixed income securities and equity securities, money market and cash instruments and offers distribution classes which aim to deliver regular and predictable payouts (which may be paid out of capital) to address income needs in retirement.

Investment strategy

The Manager's asset allocation strategy is to forecast long term expected returns for the different global asset classes, and use these to decide the Sub-Fund's neutral asset allocation, favouring the asset classes with superior long term expected returns. The Manager assesses risk using long term volatilities and correlations between asset classes to forecast the portfolio volatility from different asset allocation mixes with the aim to fit an allocation that is aligned with the Sub-Fund's risk tolerance. Both qualitative and quantitative factors are considered by the Manager to determine the active asset allocation around the neutral asset allocation.
